

Digital Signage Networks

From Dynamic Image Technologies

The Digital Signage Networks High Definition Interactive Media Delivery System provides a secure end-to-end, wireless IP-based solution for digital signage, business training and multimedia content distribution. Complete turn-key, managed systems are available, or network operators can integrate their own solutions.

This rugged, reliable and secure device is also available with a wide selection of integrated LCD screens, with or without interactive touch-screen capability.

Cost effective high definition Network Solution

- Integrated solution reduces hardware cost
 - Non PC based
 - Linux based eliminates expensive and complicated OS
 - Simple interface electronics, TV tuner eliminated
 - Low power consumption provides economical, environmentally friendly operation
- Wireless network reduces installation cost

Flexible Solutions

- Integrated 802.11 b/g wireless capability
- Ethernet port supports wired networks
- Support content to full 1080p HD resolution

Manage Content through SignCommander™

- Monitor and control multiple Digital Signs through the web based application for immediate content update
- Content scheduling
 - Manage all signs in network independently
- Content Delivery
 - Schedule video or static ad programming to run at desired times
- Marketing campaign statistics viewable on demand

Easy to configure and maintain

- Updates happen in the background, providing uninterrupted playback
- Automated configuration and diagnostic software included
- Security features included

*** Customized LCD integrated solutions available**
